

Installing Apps From Our Server – HowTo

Just a little information: how to install apps from our server into your local Android smartphone! We are offering most apps packed in a ZIP file with some more information. You can download this file, unpack the Android APK program and transfer and install this APK file on your smartphone device.

Steps to do:

- 1) Download packed ZIP file from our server
- 2) Unpack ZIP file (as you prefer: at your local computer or directly at your smartphone)
- 3) If you unpacked files at your local computer: transfer Android APK file to your smartphone, e.g. use folder /Download as destination
- 4) Click APK file at your Android device will start installing process
- 5) If needed: Do not forget to enable permissions for your app, e.g. camera (if you want to read barcodes) or others. Documentaton of the app will normally inform about needed permissions!
- 6) Start app at your smartphone

Note: if you make an update – and Android sends error message e.g.: App can not be installed: in most cases this indicates a simple version conflict. Uninstall existing app and try again. This will work in most cases! But keep in mind: Uninstalling will delete all files at your smartphone. If have have important data – you have to backup this before unintalling!
